

The Breast Cancer Risk Assessment and Prevention Program at Roswell Park was initiated with a generous endowment from the Buffalo Sabres Alumni Association.

# Breast Cancer RISK ASSESSMENT & PREVENTION PROGRAM

## AT ROSWELL PARK COMPREHENSIVE CANCER CENTER

The Breast Cancer Risk Assessment and Prevention Program is for women who are at above-average risk of breast cancer. The program provides these women with: a comprehensive breast cancer risk assessment; regular clinical breast exams; breast imaging; and, when appropriate, genetic counseling and testing. In addition, they are counseled on options for reducing breast cancer risk and on available clinical research studies in risk evaluation and cancer prevention.

### RISK FACTORS FOR BREAST CANCER INCLUDE:

- ✓ A history of breast and/or ovarian cancer among your mother, father, brother or sister, or at least two other close relatives
- ✓ A known mutation in one of the breast cancer-related genes in you or your family
- ✓ A personal history of abnormal breast biopsy
- ✓ Prior radiation treatment to the chest

Women deemed eligible for the program are seen by a specially trained Nurse Practitioner, in coordination with their personal physician and a breast cancer physician at Roswell Park.

Appointments for the program are on Mondays. Women concerned about their risk of developing breast cancer should call **1-800-ROSWELL** (1-800-767-9355) for a risk evaluation to determine their eligibility for the program.
