

Breast Care of Western New York

Mariola Poss, MD, FACS
Breast Surgical Oncologist

David Crooks, MD, FACS
Surgical Oncologist

What Sets Us Apart

- As a Roswell Park Care Network member, we're linked to our region's only comprehensive cancer center designated by the National Cancer Institute. Our patients benefit from access to all of Roswell Park's services, including the latest treatment advances and clinical trials.
- Patients can undergo the most critical steps of breast cancer care — screening, detection, surgical consultation and follow-up care — in a convenient, closer to home location.
- Ancillary clinical services such as genetic testing and counseling and breast reconstruction surgery consultation.

As a Care Network member of Roswell Park Comprehensive Cancer Center, our patients have full access to Roswell Park's nationally ranked, multidisciplinary breast cancer care, including the latest surgical approaches, medical therapeutics, genomic testing, advanced radiotherapy services and clinical trials.

Here in our Williamsville location, patients no longer have to choose between quality cancer care and convenience.

Accurate, Early Detection

We use the latest imaging technology including 3D mammography and breast ultrasound for the detection of early breast cancer and other breast conditions. All imaging and pathology is reviewed by Roswell Park's diagnostic radiologists and pathologists who focus exclusively on breast cancer.

Surgical Treatment Planning

We provide treatment planning and consultation for the full range of surgical options including breast conserving and oncoplastic approaches for lumpectomy, mastectomy, nipple-sparing mastectomy and other breast cancer surgery.

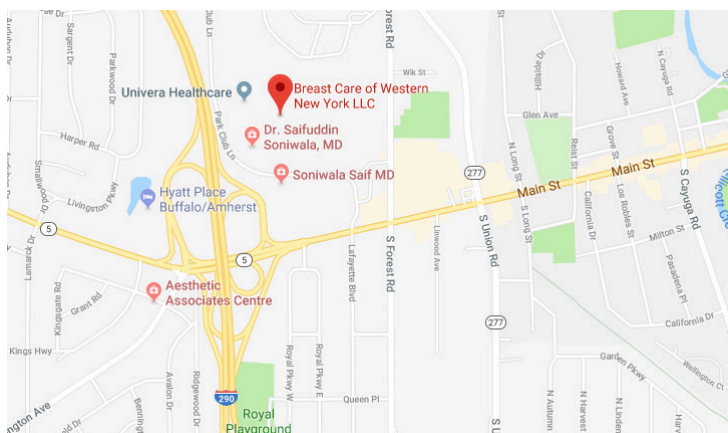

Facing Forward

Our patients may access Roswell Park's comprehensive supportive and survivorship services. In addition, our Williamsville location offers genetic testing and counseling, and consultation with our plastic and reconstructive surgeon to learn options for immediate or delayed breast reconstruction.

SERVICES AT Breast Care of WNY

- 3D mammography for routine screening and diagnosis
- Breast ultrasound
- Surgical consultation and follow-up clinical visits
- Genetic testing and counseling
- Consultation for immediate or delayed breast reconstruction
