**ROSWELL
PARK**

COMPREHENSIVE CANCER CENTER

INFECTION PREVENTION

WHY WORRY ABOUT INFECTIONS?

Cancer treatments such as chemotherapy and radiation are very important in fighting cancer. Their job is to destroy cancer cells. Unfortunately, these treatments can also kill some of the good cells that help your body fight infections. Washing or sanitizing your hands is the single most important thing you can do to prevent spreading the germs that cause infections. You play an important role in preventing the spread of germs throughout our hospital. You can be confident that everyone at Roswell Park is working hard to prevent the spread of germs and infection. But to truly win the fight, we need your help.

WHAT YOU CAN DO

- Always wash your hands or use a hand sanitizer after you cough, sneeze, blow your nose, use the toilet, or touch food trays, cups, the telephone or the remote control.
 - When you wash your hands, it is recommended that you wash your hands with soap and water or alcohol-based hand sanitizer for at least 15 seconds. A good way to remember is to sing “Happy Birthday” twice while you are washing your hands. Cover all surfaces including the back of your hands, wrists, between your fingers, under your nails, and around your thumbs.
 - Try not to rub your eyes or put your fingers in your mouth or nose since germs usually enter your body through these areas.
 - Ask others: “Did you wash your hands?”
 - As soon as visitors enter your room, ask them to wash or sanitize their hands. Don’t worry that they will be insulted. Your family and friends have your best interests in mind and they will be glad to do it.
 - Ask our staff – including doctors, nurses, medical technicians, housekeeping and food service workers – whether they have washed or sanitized their hands. They all work hard to prevent infections and keep you safe so they expect you to ask them. **Anybody who enters your room should wash their hands!**

WHAT IS MRSA?

“Staph” or *Staphylococcus aureus*, is a type of bacteria that naturally exists in the environment, including on people’s skin. If the bacteria enters under the skin through a cut or scrape, the staph bacteria may cause skin infections. Infections caused by staph may be red, swollen, painful, or have pus or other drainage. Most staph infections are minor and can be treated easily with antibiotics. Some staph infections are resistant to treatment by a class of antibiotics and are known as *Methicillin-Resistant Staphylococcus aureus* or “MRSA.” This makes these infections harder to treat and very specific antibiotics must be used to treat the infection.

If a patient is known to have an MRSA at Roswell Park the following occurs:

- A sign indicating “Contact Precautions” will be placed next to the door.
- Health care workers who enter the room and care for you will wear gloves and a gown. If you are coughing and MRSA is isolated in your respiratory tract additional precautions may include a mask and goggles.
- It is important for everyone entering and leaving your room to wash or sanitize their hands.
- Patients must also wash their hands to avoid spreading the bacteria to others.

YOU play an important role in preventing the spread of germs throughout our hospital. You can be confident that our hospital personnel are dedicated to practicing good hand hygiene and working hard to prevent the spread of germs and infection. But to truly win the fight, we need your help: keep your hands as clean as possible and ask everyone who enters your room to wash their hands.

HIV TESTING

Roswell Park offers HIV testing to our patients. Please read the following information to learn more about HIV and to help you decide whether you would like to be tested:

- HIV is the virus that causes AIDS and can be transmitted through:
 - unprotected sex (vaginal, anal, or oral sex) with someone who has HIV;
 - contact with blood as in sharing needles (piercing, tattooing, drug equipment including needles);
 - HIV-infected pregnant women to their infants during pregnancy or delivery or while breastfeeding.
- There are treatments for HIV/AIDS that can help an individual stay healthy.
- Individuals with HIV/AIDS can adopt safe practices to protect uninfected persons from acquiring HIV and infected people from acquiring additional strains of HIV.
- Testing is voluntary and can be done anonymously at a public testing center.
- The law protects the confidentiality of HIV test results and other related information.
- The law prohibits discrimination based on an individual's HIV status and services are available to help with such consequences.
- Consent for HIV related testing remains in effect until it is withdrawn verbally or in writing. If the consent was given for a specific period of time, it remains in effect for that time period only. In any case, persons may withdraw their consent at any time.

HEPATITIS C TESTING

The Centers for Disease Control and Prevention recommend that anyone born from 1945 through 1965 get tested for Hepatitis C. Roswell Park offers Hepatitis C testing to all our patients born between 1945 and 1965.

- While anyone can get Hepatitis C, more than 75% of adults infected are baby boomers, people born from 1945 through 1965.
- Most people with Hepatitis C don't know they are infected. Liver disease, liver cancer, and deaths from Hepatitis C are on the rise.
- The longer people live with Hepatitis C, the more likely they are to develop serious, life-threatening liver disease.
- Getting tested can help people learn if they are infected and get them into lifesaving care and treatment. Treatments are available that can eliminate the virus from the body and prevent liver damage, cirrhosis, and even liver cancer.
