

Chemotherapy/Infusion Treatment Process

These 5 steps will guide you through the process

1 Phlebotomy

You will receive a lab script from your nurse. Please have blood drawn at the lab 1-3 days before each chemo/infusion appointment.

2 Lab

The lab analyzes your blood samples and sends a report to your nurses and doctors.

3 Nursing Assessment

If you didn't have a doctor's appointment before your chemo/infusion appointment, you will receive a physical exam to make sure you are well enough to receive your treatment.

4 Pharmacy

After receiving lab results and a completed nursing assessment, your doctor will approve your treatment and your medications will be mixed.

5 Chemo/Infusion Appointment

You are now ready to receive your treatment.

Please show up on time to your appointment.
Arriving late is likely to significantly increase your wait time in the clinic.

We listen to your suggestions and are committed to delivering timely service.
