WHAT YOU SHOULD KNOW
The cervix is the lower narrow part of the uterus (womb) that connects to the vagina (birth canal). Cervical cancer usually affects women between the ages of 35 and 44 but it’s important for teens to learn about it now.

WHAT IS HUMAN PAPILLOMAVIRUS (HPV)
Human Papillomaviruses are a group of viruses, some of which cause genital warts (papillomas) and/or cancers of the cervix, anus, vagina, penis, throat, and other oral and head and neck cancers.

These viruses spread through sexual contact, including vaginal, oral or anal sex. Many people don’t know they’re infected because they don’t have symptoms, but the virus still causes damage.

ABOUT THE HPV VACCINE
- FDA-approved vaccines prevent several HPV strains most commonly associated with cervical and other cancers. These vaccines include Cervarix and Gardasil 9.
- Each HPV vaccine involves two to three doses to be fully vaccinated (depending on age at vaccination).
- Doctors advise that all adolescents (guys, too) get vaccinated against HPV at age 11 or 12.

DID YOU KNOW?
- Most cervical cancers are caused by infection with a common virus, called Human Papillomavirus (HPV).
- HPV infections are very common in adolescents (age 20 or younger).
- Although some people develop warts from an HPV infection, many don’t have any symptoms. Someone can be infected and pass the virus without knowing it.
- You can prevent many HPV infections by getting vaccinated with the HPV vaccine.
RISK FACTORS FOR CERVICAL CANCER

You may be at increased risk for cervical cancer if you:

- Have an HPV infection of the cervix
- Give birth to many children
- Have many sexual partners
- Have first sexual intercourse at a young age
- Smoke
- Use birth control pills for a long time (more than 5 years)
- Have a weakened immune system (from HIV or immune-suppressing drugs)

Having risk factors does not mean you will get cervical cancer. Talk to your doctor about your cancer risk.

TAKE CHARGE

ACT TO HELP PREVENT CERVICAL CANCER

- Get vaccinated against HPV (don’t forget to get all recommended doses)
- Talk to your doctor about cervical cancer screening at age 21
- Don’t smoke
- Practice safe sex to help reduce transmission of HPV

MEET OUR DOCTORS

1. Stacey Akers, MD, FACOG
   Gynecologic Oncology
2. Peter Frederick, MD, FACOG
   Director, Minimally Invasive Surgery, Gynecologic Oncology
3. Shashikant Lele, MD, FACOG
   Clinical Chief, Gynecologic Oncology
4. Katherine Mager, MD
   Gynecologic Oncology
5. David Mattson, Jr., MD
   Director, GYN Radiation
6. Adekunle Odusi, MD, PhD, FRCOG, FACOG
   Deputy Director
   Chair, Gynecologic Oncology
   Director, Center for Immunotherapy
7. Emese Zsiros, MD, PhD, FACOG
   Gynecologic Oncology

LEARN MORE

www.yroswell.com
A website designed specifically for young people who want to get involved and help create a world without cancer.

www.kidshealth.org
Honest, accurate info and advice about health, emotions and life.

www.cancer.gov/types/cervical
Cervical cancer info from the National Cancer Institute.

www.cancer.gov/types/aya
Information and resources for adolescents and young adults with cancer.

Before cancer appears, cells on the cervix go through changes, called dysplasia, which can be detected through a screening called a Pap test.
