KNOW YOUR RIGHTS
INFECTION PREVENTION

WHY WORRY ABOUT INFECTIONS?
Cancer treatments such as chemotherapy and radiation are very important in fighting cancer. Their job is to destroy cancer cells. Unfortunately, these treatments can also kill some of the good cells that help your body fight infections. Washing or sanitizing your hands is the single most important thing you can do to prevent spreading the germs that cause infections.
You play an important role in preventing the spread of germs throughout our hospital. You can be confident that everyone at Roswell Park is working hard to prevent the spread of germs and infection. But to truly win the fight, we need your help.

WHAT YOU CAN DO
- Always wash your hands or use a hand sanitizer after you cough, sneeze, blow your nose, use the toilet, or touch food trays, cups, the telephone or the remote control.
- When you wash your hands, it is recommended that you wash your hands with soap and water or alcohol-based hand sanitizer for at least 15 seconds. A good way to remember is to sing “Happy Birthday” twice while you are washing your hands. Cover all surfaces including the back of your hands, wrists, between your fingers, under your nails, and around your thumbs.
- Try not to rub your eyes or put your fingers in your mouth or nose since germs usually enter your body through these areas.
- Ask others: “Did you wash your hands?”
- As soon as visitors enter your room, ask them to wash or sanitize their hands. Don’t worry that they will be insulted. Your family and friends have your best interests in mind and they will be glad to do it.
- Ask our staff – including doctors, nurses, medical technicians, housekeeping and food service workers – whether they have washed or sanitized their hands. They all work hard to prevent infections and keep you safe so they expect you to ask them.

ANYBODY who enters your room should wash their hands!

WHAT IS MRSA?
“Staph” or Staphylococcus aureus, is a type of bacteria that naturally exists in the environment, including on people’s skin. If the bacteria enters under the skin through a cut or scrape, the staph bacteria may cause skin infections. Infections caused by staph may be red, swollen, painful, or have pus or other drainage. Most staph infections are minor and can be treated easily with antibiotics. Some staph infections are resistant to treatment by a class of antibiotics and are known as Methicillin-Resistant Staphylococcus aureus or “MRSA.” This makes these infections harder to treat and very specific antibiotics must be used to treat the infection.

If a patient is known to have an MRSA at Roswell Park the following occurs:
- A sign indicating “Contact Precautions” will be placed next to the door.
- Health care workers who enter the room and care for you will wear gloves and a gown. If you are coughing and MRSA is isolated in your respiratory tract additional precautions may include a mask and goggles.
- It is important for everyone entering and leaving your room to wash or sanitize their hands.
- Patients must also wash their hands to avoid spreading the bacteria to others.

YOU play an important role in preventing the spread of germs throughout our hospital. You can be confident that our hospital personnel are dedicated to practicing good hand hygiene and working hard to prevent the spread of germs and infection. But to truly win the fight, we need your help: keep your hands as clean as possible and ask everyone who enters your room to wash their hands.

HIV TESTING
Roswell Park offers HIV testing to our patients. Please read the following information to learn more about HIV and to help you decide whether you would like to be tested:
- HIV is the virus that causes AIDS and can be transmitted through:
  - unprotected sex (vaginal, anal, or oral sex) with someone who has HIV
  - contact with blood as in sharing needles (piercing, tattooing, drug equipment including needles)
  - HIV-infected pregnant women to their infants during pregnancy or delivery or while breast feeding
- There are treatments for HIV/AIDS that can help an individual stay healthy.
- Individuals with HIV/AIDS can adopt safe practices to protect uninfected persons from acquiring HIV and infected people from acquiring additional strains of HIV
- Testing is voluntary and can be done anonymously at a public testing center.
- The law protects the confidentiality of HIV test results and other related information.
- The law prohibits discrimination based on an individual’s HIV status and services are available to help with such consequences.
- Consent for HIV related testing remains in effect until it is withdrawn verbally or in writing. If the consent was given for a specific period of time, it remains in effect for that time period only. In any case, persons may withdraw their consent at any time.

Hepatitis C Testing
The Centers for Disease Control recommend that anyone born from 1945 through 1965 get tested for Hepatitis C. Roswell Park will now be offering Hepatitis C testing to all our patients born between 1945 and 1965.
- While anyone can get Hepatitis C, more than 75% of adults infected are baby boomers, people born from 1945 through 1965.
- Most people with Hepatitis C don’t know they are infected. Liver disease, liver cancer, and deaths from Hepatitis C are on the rise.
- The longer people live with Hepatitis C, the more likely they are to develop serious, life-threatening liver disease.
- Getting tested can help people learn if they are infected and get them into lifesaving care and treatment. Treatments are available that can eliminate the virus from the body and prevent liver damage, cirrhosis, and even liver cancer.

WHAT IS MRSA?

“What is MRSA?” and “MRSA: Resistant Staphylococcus aureus” are two of the most important terms to understand when talking about infection prevention.

MRSA, or Methicillin-Resistant Staphylococcus aureus, is a type of bacteria that is resistant to methicillin and other related antibiotics. It can cause a variety of infections, including skin infections, bloodstream infections, and respiratory infections.

MRSA is spread through direct contact with infected individuals or their contaminated surfaces and objects. It can also be transmitted through the air, especially in healthcare settings.

There are several ways to prevent MRSA infection, including:
- Washing your hands regularly with soap and water for at least 20 seconds or using an alcohol-based hand sanitizer.
- Cleaning and disinfecting objects and surfaces that are frequently touched, especially in healthcare settings.
- Practicing good respiratory hygiene, such as coughing and sneezing into a tissue or your sleeve, to prevent the spread of MRSA through the air.
- Avoiding contact with people who have MRSA infections or skin infections.
- Getting vaccinated against influenza and pneumococcal disease.

Hepatitis C Testing

Hepatitis C is a viral infection that causes inflammation of the liver. It can be transmitted through contact with infected blood, making it a serious concern for people who share needles or who work with blood.

Some key facts about Hepatitis C:
- Hepatitis C is a bloodborne virus that can cause chronic liver disease, which can lead to cirrhosis, liver failure, and liver cancer.
- People who are at risk for Hepatitis C include people who inject drugs, people with a history of blood transfusions before 1992, and people who have received a transplant from a person infected with Hepatitis C.
- Hepatitis C is treatable, and early treatment can prevent serious complications.

There are several ways to prevent Hepatitis C infection, including:
- Avoiding contact with infected blood.
- Practicing safe sex by using condoms.
- Avoiding injecting drugs or sharing needles.
- Getting vaccinated against hepatitis A and B.
- Getting tested for Hepatitis C if you are at risk.

HEALTH CARE
Hospitalization: VA facilities give the highest priority for medical care to those Veterans who are: rated service-connected disabled; refiled by disability from active duty; were awarded the Purple Heart; in receipt of VA pension; are eligible for Medicaid; are former POWs; in need of care for a condition related to exposure to dioxin or other toxic substance (Agent Orange) or Gulf War diseases, or exposure to ionizing radiation while on active duty. Non-service connected Veterans may be treated if facility resources allow, and may be subject to a test of financial means and a co-payment.

Veterans who served in combat locations since Nov. 11, 1996 are eligible for free health care for five years following discharge for conditions potentially related to combat service.

Outpatient Medical Treatment: VA provides medical services to eligible Veterans on an outpatient basis within the limits of the facilities.

HOMES (STATE) FOR VETERANS
The Homes for Veterans Program offers low interest rate mortgage programs and additional benefits to qualified Veterans making homeownership more attainable for Veterans by relaxing eligibility requirements, eliminating fees, and providing closing cost assistance. Co-Op’s eligible.

HOME LOAN GUARANTY
Federal: Certain Veterans and spouses are eligible for GI loans for homes, condominiums and manufactured homes. Participating financial institutions receive a guarantee from the VA covering part of the loan in the event of default on repayment. Applicants must apply for a certificate of eligibility.

INSURANCE
 Holders of USGI, NSLI and VSI policies can obtain information concerning conversion, beneficiary changes, loans and disability riders from their local State Veteran Counseling Center. Service-members with SGU have 120 days following separation from service to convert to a permanent insurance plan.

LICENSES & PERMITS
Veterans with a 40% or greater disability rating are eligible for low-cost hunting and fishing licenses, and free use of state parks, historic sites and recreation sites.

NURSING HOME CARE
Nursing Home (Domiciliary) Care (Federal): Admission limited to eligible Veterans who are disabled, unable to earn a living and in need of medical treatment and full care other than hospitalization. Nursing home care can be authorized for a limited period on referral from VA medical centers.

State Veterans Homes: The New York State Department of Health operates four state Veterans homes for Veterans, spouses and certain parents: a 242-bed Veterans home at Oxford, Chenango County, a 250-bed Home at St. Albans, Queens; a 126-bed Home in Batavia, Genesee County; and a 250-bed home at Montrose, Westchester County. A 350-bed Veterans Home on the campus of SUNY at Stony Brook, Long Island is operated by the University’s Health Sciences Center. Health care and skilled nursing services are available at all facilities.

PENSION BENEFITS
VA Disability Pension (Non-Service Connected): A monthly pension is payable to eligible wartime Veterans, or surviving spouses, with limited income and non-service-connected disabilities that are permanent and totally disabling. Veterans must be determined to be permanently and totally disabled for pension purposes. Payments based on annual income.

PROPERTY TAX EXEMPTION
Partial exemption from real property taxes is based on wartime or “Cold War era” service, combat and expeditionary duty, and degree of service-connected disability. Applications shall be filed before the local Taxable Status Day. Qualifying surviving spouses may file for benefit based on spouse’s military service. Gold Star parents may be eligible, subject to local statute. Exemption applies to local and county property taxes and may apply to school taxes.

RE-EMPLOYMENT
Application to former employer for restoration to pre-military position, other than temporary employment, should be made within 90 days of separation. Job reinstatement is for full-time, status and pay. Reservists after initial training must seek reinstatement within 31 days.
