

ROSWELL PARK COMPREHENSIVE CANCER CENTER

BREAST RECONSTRUCTION SURGERY

Info Sheet

BREAST RECONSTRUCTION DOES NOT INCREASE the chance of breast cancer coming back or make it harder to check for recurrence.

Most women have **2 to 4 SURGERIES** to achieve the desired result.

Patients often have surgery on the opposite breast — to enlarge, reduce, or lift — to match the shape of the reconstructed breast.

WHEN SHOULD YOU CONSIDER BREAST RECONSTRUCTION?

WHAT YOU SHOULD KNOW

The goal of **breast reconstruction surgery** is to replace the skin, breast tissue and nipple that's removed during breast cancer surgery such as mastectomy, partial mastectomy or lumpectomy. The decision to undergo breast reconstruction after cancer surgery is a deeply personal choice. Many women choose to have the surgery because it can:

1

Improve emotional and social well-being

2

Restore feelings of wholeness and attractiveness

3

Eliminate the need for external prosthesis

TYPES OF BREAST RECONSTRUCTION

Surgeons typically use one of these approaches to reconstruct a breast:

- ✓ **Implants.** This procedure usually requires placement of a skin expander before the silicone or saline implant is inserted.
- ✓ **Your own tissue** (known as flaps). These procedures use skin, fat and muscle tissue from other body areas such as the abdomen, back, thighs or buttocks.
- ✓ **Combination of implants and own tissue.**

ANYTIME (AS EARLY AS YOUR DIAGNOSIS OR YEARS LATER)

Learning about your reconstruction options, and the outcome you can expect, should be part of your cancer treatment planning — even if you delay reconstruction or defer your decision until a later time.

Your breast reconstruction options will depend on your disease status and overall health, your treatment plan (such as whether you have radiation therapy) and your preference.

ROSWELL PARK OFFERS

IMMEDIATE reconstruction

performed at the time of mastectomy or other breast cancer surgery.

DELAYED reconstruction

performed months or even years after cancer treatment.

REVISIONS of prior reconstructions

to address issues with implants, asymmetry or other problems.

If you have radiation therapy, you may need to wait several months after completing treatment to allow chest skin to heal. Some women decide years later that they desire a reconstruction.

OUR PLASTIC AND RECONSTRUCTIVE SURGEONS CAN HELP YOU

NO MATTER WHERE YOU HAD YOUR CANCER SURGERY OR PREVIOUS RECONSTRUCTION

WILL MY
HEALTH INSURANCE
COVER IT?

→ **LIKELY**

REQUIRED COVERAGE INCLUDES:

✓	✓	✓
all stages of reconstruction on the affected breast	surgery and reconstruction on the other breast to produce a symmetrical appearance	prostheses and treatment of physical side effects of mastectomy such as lymphedema

Federal law requires health insurance plans that cover mastectomy costs to also cover reconstruction surgery or other post-mastectomy treatments for female breast cancer patients.

BREAST RECONSTRUCTION

is a process that may take **SIX** to

TWELVE MONTHS to complete if you are working around chemotherapy and radiation treatments.
