

Advanced Endoscopic Services

Combining leading-edge technology and minimally invasive approaches

We offer **interventional options not available elsewhere in the region** for diagnosis and treatment of malignant and nonmalignant gastrointestinal conditions.

What Sets Us Apart

- **Double Balloon enteroscopy.** RPCI is the only facility in the region with the technological capability to perform this option.
- **High-volume endoscopic ultrasound (EUS).** Performing 800 procedures a year, RPCI is the only high-volume center for EUS in the Buffalo/Niagara region.
- **Fellowship-trained therapeutic endoscopists.** Our center is the only WNY facility staffed by physicians with this advanced training.
- **New Endoscopy Center.** State-of-the-art clinical space designed for optimal patient safety and comfort, efficient multidisciplinary physician collaboration and immediate, on-site pathology review. Nearly all procedures performed on outpatient basis.

Services we offer

Our Endoscopic Team offers the most advanced options for diagnosis, staging, treatment and palliation, including:

- Endoscopic ultrasound
- Endoscopic ultrasound with fine needle aspiration
- Endoscopic retrograde cholangiopancreatography (ERCP)
- Endoscopic ultrasound assisted ERCP
- Electrohydraulic lithotripsy of complex bile duct stones
- Cholangioscopy
- Radiofrequency ablation of Barrett's Esophagus
- Enteral stenting
- Endoscopic drainage of pancreatic pseudocysts
- Capsule endoscopy
- Double balloon enteroscopy, with deeper access to small intestine
- Photodynamic therapy (PDT)
- Endoscopic mucosal resection

Conditions we treat

We use endoscopic procedures to treat benign, precancerous and malignant disease, including:

- Esophageal, gastric, duodenal, ampullary, pancreatic, bile duct, colon and rectum cancers
- Pancreatic cysts
- Bile duct strictures
- Bile duct stones
- Gastrointestinal obstruction
- Gastrointestinal lesions
- Barrett's esophagus
