LUNG CANCER SCREENING AT ROSWELL PARK

You should undergo screening if you have the following 3 factors:

- **AGE**: 55-79 Years old
- **PACK YEARS**: 30 Pack/Years
- **SMOKING HISTORY**: Actively smoked within the last 15 years

*Some insurance plans only cover until age 77*

- **Stage 0 & I**:
  - **70%**
- **Stage II**:
  - **30%**
- **Other Stages**:
  - **24%**
- **Unknown Stage**:
  - **4%**

Of the high-risk people who are screened for lung cancer, we find lung nodules that are deemed suspicious in about 24%. Of those, slightly less than 4% are found to have lung cancer.

70% of the malignancies we find with our screening program are very early cancers, typically stage 0, I & II. These early cancers can be treated effectively.
