## Topic: Neutropenic Patient Infection Prevention Survey primary copy

5/1/2008

	USC/Norris Cancer Hospital	University of Texas/MD Anderson Cancer Center	Roswell Park Cancer Institute					
What type of isolation do you use for neutropenic patients? Please type all that apply. A. Clean gloves B. Mask C. Sterile Gowns D. Clean Gowns E. Hepa Filters F. Private Rooms G. Laminar Air Flow H. Other	abf - for induction positive pressure rooms (? HEPA)	A, B, D, E, F	A, B, D, E, F,G					
Is this the same type of isolation for BMT Patients? Yes No	Yes	Yes	Yes					
If No, what do you different for BMT patients?								
Do you have a separate protective environment with hepa filters, clean gowns, cap, mask, shoe covers and clean gloves for neutropenic patients? Yes	No	We have separate PE for chemo induction of patients over 50 or otherwise high risk	Yes					
Do you require patients to wear mask when leaving room? Yes No	Yes	Yes	Yes					
Do you restrict visitors for neutropenic patients? Yes No	Yes	Yes	Yes					
If Yes, what type of restrictions?	Healthy immediate family	No children 12 and under, sick visitors	Screen for fever, respiratory illness, infection or exposures and immunization with live virus					
Do you have neutropenic patients follow the neutropenic diet? YES No	Yes	Yes	Yes					

What type of oral care regimen do you use?	Yes		Peridex - Mycelex									
Do your AML induction patients become outpatients when chemo is completed? Yes No	Yes	Yes	Yes when ANC greater then 1									
Do you use prophylacticantibiotics when patients are neutropenic? YesNo		Yes	Yes									
What is your infection rate (pneumonia & bacteremia) for acute leukemia induction?
